NORTH Dakota Be Legendary.™

Community Dashboard Data Disclosure - Updated October, 2019

	Source of Data	Web link or Copyright	Source & Last update / date stamp
Water utility rate	AE2S Nexus	www.ae2s.com / www.ae2snexus.com / Copyright 2019 © AE2S - All Rights Reserved. Information is provided on a voluntary basis by participating systems. There is a good cross section of ND communities included, but not all cities are in this data. You will readily note that the monthly utility costs among communities are highly variable. This can be attributed to a number of factors, such as water source, community size, presence/absence of a mechanical wastewater treatment plant, topography, condition of the existing infrastructure, and local policies relative to depreciation and capital improvement funding. The information presented can be used to determine where a community would rank based on a typical monthly residential utility bill with consumption of 6,000 gallons, bearing in mind this variability.	Static spreadsheet, September 2019
Geo-Location	esri	http://geocode.arcgis.com/arcgis/rest/services/World/GeocodeServer/findAddressCandidates	Real-time URL, October 2019

Definitions:

Real-time API means we are accessing specific datasets by using an API (e.g.: Census, BEA, BLS, bike/walk scores).

Real-time URL means we are accessing content hosted on a web site's URL and can be further broken out by the following sub-classifications:

Grabbing web page content directly as the data source (e.g.: Electricity Price Averages).

Searching for a link to one or more static documents based on key words (e.g.: Property Tax Statistics Reports).

A direct link to a specific document's URL (e.g.: Rail Stops' PDF maintained on the PSC web site, School Finances Excel spreadsheet on DPI's web site).

Static spreadsheets means we have either created or downloaded a copy of an existing file to Azure blob storage and are loading it from that static location / file. The only way the latest data will be reflected is by obtaining an updated file and, should the name or format change, adjusting the data model accordingly (e.g.: Farmers Markets, Tourism, Child Care Providers/Rates).
